STORAGE METHOD

● Storage Conditions

A. Before opening the package:

The LEDs should be kept at $-35^{\circ}\text{C} \sim 85^{\circ}\text{C}$ and RH: 45% ~ 85%. The LEDs should be used within a year. When storing the LEDs, moisture proof packaging with absorbent material (silica gel) is recommended.

B. After opening the package:

The LEDs should be kept at $\leq 30^{\circ}\text{C}$ and $\leq 70\%\text{RH}$. The LEDs should be soldered within 168 hours (7) after opening the package. If unused LEDs remain, they should be stored in moisture proof packages, such as sealed containers with packages of moisture absorbent material (silica gel).

It is also recommended to return the LEDs to the original moisture proof bag and to reseal the moisture proof bag again.

● If the moisture absorbent material (silica gel) has faded away or the LEDs have exceeded the storage time, baking treatment should be performed using the following conditions.

Baking treatment: more than 24 hours at $65 \pm 5^{\circ}\text{C}$
